

## How can Therapy Advantage help your patients prevent a fall?

*Three older Ohioans suffered a fatal fall per day in 2015.*

The American Society of Geriatrics recommends a falls risk assessment carried out by a health care professional as one way to prevent falls in older adults.

Therapy Advantage offers fall risk assessments to:

- Detect weakness with transfers and gait
- Identify potential safety concerns with basic mobility
- Determine if an assistive device is warranted
- Provide education about fall prevention
- Discuss treatment options to improve balance and prevent falls
